When should a ventilator or Respiratory Assist Device (RAD) be considered?

Ventilators are covered for neuromuscular diseases, thoracic restrictive diseases and chronic respiratory failure consequent to chronic obstructive pulmonary disease (COPD). These ventilator-related disease groups overlap conditions described in the Respiratory Assist Devices LCD used to determine coverage for bilevel PAP devices. Each of these disease categories are conditions where the specific presentation of the disease can vary from patient to patient. Choice of an appropriate treatment plan, including the determination to use a ventilator vs. a bilevel PAP device, is made based upon the specifics of each individual beneficiary’s medical condition. In the event of a claim review, there must be sufficient detailed information in the medical record to justify the treatment selected.

Billing criteria for ventilators

Ventilators are covered by Medicare for the treatment of neuromuscular diseases, thoracic restrictive diseases and chronic respiratory failure consequent to chronic obstructive pulmonary disease.²

Ventilators are included in Medicare’s “Frequently & Substantially Serviced” payment category.³ Equipment in this payment category is paid on a monthly rental (RR) basis while the equipment is medically necessary. No payment is made by Medicare for the purchase of equipment, maintenance and servicing, or for the replacement of items in this category.⁴ Due to the “Frequently & Substantially Serviced” payment category, no separate payment is allowed for ventilator accessories or supplies under the Medicare Program.⁵

Documentation to support the medical necessity of a ventilator may include:

- Valid physician’s order
- Payable diagnosis
- Medical necessity documented in the medical record
- Ventilator settings
- Documentation describing the supplier’s backup plan in case the primary ventilator breaks down
- Proof of delivery⁶

Documentation to support continued medical need must also be on file.

Reimbursement Fast Facts: Ventilators

Understanding Medicare coding and coverage for ventilators

Ventilators are medical devices that provide mechanical ventilation to assist with or replace patients’ spontaneous breathing. Mechanical ventilation is often categorized based on the interface used, such as a tracheostomy tube for invasive ventilation, or a mask for non-invasive ventilation.
Q & A

Q: What additional items are typically supplied to ventilation patients?
Since ventilators are covered under the “Frequently & Substantially Serviced” payment category, bills for supplies and accessories are not separately allowed. However, other items may be medically necessary. Depending on the patient’s condition, items like oxygen, nebulizers, suction machines and tracheostomy supplies may also be provided. Please check with your payor to confirm coverage and billing details.

Q: Are humidifiers separately reimbursable?
No, under the “Frequently & Substantially Serviced” payment category, humidifiers are bundled into the ventilator reimbursement and are not separately billable. When a ventilator is purchased by the beneficiary or acquired before Medicare eligibility, separate reimbursement may be considered.

Q: Is a face-to-face meeting required prior to writing a detailed written order for a ventilator?
Yes, ventilators are included in the list of DME items that require a face-to-face encounter examination with a beneficiary in the six (6) months prior to the written order.

Q: Can a supplier bill for a positive airway pressure (PAP) device in addition to a ventilator?
If both a ventilator and a PAP device (E0601, E0470, E0471) are billed, the PAP device will be denied as not medically necessary.

Q: Can a supplier bill for a second ventilator or a backup ventilator?
It depends. Medicare does not pay separately for a backup ventilator. Medicare’s payment for a ventilator under the “Frequently & Substantially Serviced” category includes payment for a backup ventilator if one is deemed necessary.

Although Medicare does not pay separately for backup equipment, Medicare will make a separate payment for a second piece of equipment if it is required to serve a different purpose determined based on the patient’s medical needs.

Examples of situations in which multiple items may be covered (not all-inclusive):
- A beneficiary requires one type of ventilator (e.g. a negative pressure ventilator with a chest shell) for part of the day and needs a different type of device (e.g. positive pressure RAD with a nasal mask) during the rest of the day.
- A beneficiary who is confined to a wheelchair requires a ventilator mounted on the wheelchair for use during the day, and needs another ventilator of the same type for use while in bed. Without both pieces of equipment, the beneficiary may be prone to certain medical complications, may not be able to achieve certain appropriate medical outcomes, or may not be able to use the medical equipment effectively.

Here’s an example in which a second or other multiple piece of equipment would be considered a backup and therefore would not be covered (not all-inclusive):
- A ventilator-dependent beneficiary is confined to bed and a second ventilator of the same or similar type is provided at the bedside as a precaution in case of malfunction of the primary ventilator.

Q: What documentation can be used to prove continued medical need?
Any of the following may serve as documentation justifying continued medical need:
- A recent order by the treating physician for refills
- A recent change in prescription
- A properly completed Certificate of Medical Necessity (CMN) or DME Information Form (DIF) with an appropriate length of need specified
- Timely documentation in the beneficiary’s medical record showing usage of the item

“Timely documentation” is defined as a record in the preceding twelve (12) months unless otherwise specified elsewhere in the policy.

Q: Does Medicare cover repairs or maintenance for ventilators?
Ventilators fall into the “Frequently & Substantially Serviced” payment category, and neither repairs nor maintenance and servicing are covered.
