ResMed’s range of masks for NIV

Packed with innovative technology that fine-tunes the balance between seal, stability and comfort, our masks have been engineered to meet the demands of noninvasive ventilation in the hospital and the home.

ResMed masks for NIV: from hospital to home

See ResMed.com for ResMed locations worldwide. For patent information, see ResMed.com/ip. AcuCare, AirFit, Mirage, Quattro, QuickFit and Spring Air are trademarks and/or registered trademarks of the ResMed family of companies. Specifications may change without notice. Product availability may vary across regions. © 2015 ResMed Ltd.
A complete solution: from AcuCare™ to AirFit™

ResMed offers a mask range that caters for every stage of a patient’s therapy journey—from initial setup and treatment (in both hospital and transportation), right through to discharge, and ongoing noninvasive ventilation (NIV) treatment at home.

With more than 20 years’ experience in patient interfaces, ResMed has fine-tuned the balance between stability, seal, and comfort. We have applied the quality and innovation you’d expect in a reusable mask, to our disposable hospital mask range—providing a complete, high-quality solution for patients who require NIV therapy in the hospital and the home.

Getting patients to quickly accept a mask is an important, yet challenging part of NIV therapy. ResMed’s AcuCare high-quality disposable patient interfaces for the hospital are designed to achieve fast patient acceptance of NIV by quickly establishing mask stability and a reliable seal.

By helping your patients accept NIV quickly and successfully, you can avoid the need for intubation, decrease the risk of infection, and reduce the cost and length of their hospital stay.

AcuCare disposable hospital masks: speed, stability and success

- Each AcuCare mask size covers a wide range of facial features and profiles, making size selection easy.
- AcuCare masks are also quick and easy to fit, adjust and remove, with convenient three-point, set and forget headgear, and simple click-in clips.
- By combining 3D form-fitting headgear and advanced cushion technology, AcuCare achieves mask stability without the need for forehead support.
- This helps reduce pressure points, maximise seal, and maximise comfort—all reducing the need for intubation.

Guidelines for selecting the correct AcuCare mask

1. Each AcuCare mask size covers a wide range of facial features and profiles, making size selection easy.
2. AcuCare masks are also quick and easy to fit, adjust and remove, with convenient three-point, set and forget headgear, and simple click-in clips.
3. By combining 3D form-fitting headgear and advanced cushion technology, AcuCare achieves mask stability without the need for forehead support.
4. This helps reduce pressure points, maximise seal, and maximise comfort—all reducing the need for intubation.

AirFit homecare masks: the right fit for your patients

ResMed’s premium reusable AirFit masks are suitable in both the hospital and the home, giving your patients hospital-level care even after they’ve been discharged.

- All masks in the AirFit series are lightweight, comfortable and easy to use, providing therapies that help patients remain compliant during long-term NIV.
- The series includes nasal pillow, nasal and full face models, as well as ‘for Her’ variants to suit the specific needs of female patients.

- AirFit P10 nasal pillows: Featuring advanced QuickFit™ headgear, this mask can be fitted in under 30 seconds. 3
- AirFit N10 nasal mask: Its under-eye frame delivers all the stability of a forehead support, while providing visual freedom and minimal facial contact.
- AirFit F10 full face mask: With its advanced headgear and frame working in synergy, patients can enjoy all the performance and stability of a traditional full face mask, in a sleek, compact solution.

Getting patients to quickly accept a mask is an important, yet challenging part of NIV therapy. ResMed’s AcuCare high-quality disposable patient interfaces for the hospital are designed to achieve fast patient acceptance of NIV by quickly establishing mask stability and a reliable seal.
