ResMed Air Solutions
The Science of Progress

Connect with your patients, increase compliance, grow your business.
The days of endless phone calls and service visits are over.

Which patients need help? Which don’t? Guessing is not an option. Until now, you’ve spent a lot of your time calling each and every patient, following through with service visits and often troubleshooting machines that don’t require maintenance.

It doesn’t have to be this way.

Stay connected to your patients’ needs

ResMed Air Solutions also streamlines resupply workflow, with best-practices operational guidance, patient outreach partners and materials. Remember, resupply is an integral part of keeping your patients comfortable, and in turn, compliant with their therapy.

This is efficiency at its best. This is the Science of Progress.

Recommended replacement schedule:

- Cushion: Every 1 month
- Tubing: Every 3 months
- Headgear: Every 6 months
Masks
The ResMed AirFit™ series features a variety of unique advancements, ensuring that you’ll provide just the right fit for your patients. Each mask is engineered to work seamlessly with AirSense™ 10 and AirCurve™ 10 devices, and through an integration with myAir™ will empower patients to troubleshoot problems on their own and stay on therapy.

- **AirFit™ P10**
  - Lighter and quieter for patient comfort

- **AirFit™ N20**
  - Simplicity, comfort and visual freedom

- **AirFit™ F20**
  - Full face benefits in a compact size

U-Sleep™ allows you to receive reports about patients having problems. Address them via text, email or phone.

With AirView™ you can manage patients, simplify workflows and collaborate more efficiently.

Third-party integration works with existing billing or electronic medical record (EMR) software.

With myAir™ patients can track data and are coached to get more involved with sleep therapy.

Compliance requirements are more stringent than ever, so we created ResMed Air Solutions to help you save time and expand your business. With Air Solutions, data from ResMed CPAP devices is now cloud-based, so you can proactively identify patient issues and address them as they happen. It’s management by exception, without having to leave your desk. This is the Science of Progress.
You’ll manage patients, simplify workflows and collaborate more efficiently with your patients’ care team, thanks to AirView.™

You’ll use Remote Assist to access information from your patients’ devices, so you can answer questions and troubleshoot issues from the comfort of your office.

Meanwhile, myAir™ will get patients more involved with tracking and managing their own sleep therapy, while coaching them and providing instructional videos for a variety of topics, including mask fitting.

With U-Sleep™, you’ll be able to quickly identify which patients are having problems, then address them via text, email or phone calls. It’s the ultimate in management by exception, cutting down on office visits and therapist follow-up time while increasing compliance.

And with third-party integration, ResMed Air Solutions has the capability to work with existing billing or electronic medical record (EMR) software — so you’ll spend less time entering data into multiple systems.

### Cloud Applications

**AirView™**

You’ll manage patients, simplify workflows and collaborate more efficiently with your patients’ care team, thanks to AirView.™

You’ll use Remote Assist to access information from your patients’ devices, so you can answer questions and troubleshoot issues from the comfort of your office.

**myAir™**

Meanwhile, myAir™ will get patients more involved with tracking and managing their own sleep therapy, while coaching them and providing instructional videos for a variety of topics, including mask fitting.

**U-Sleep™**

With U-Sleep™, you’ll be able to quickly identify which patients are having problems, then address them via text, email or phone calls. It’s the ultimate in management by exception, cutting down on office visits and therapist follow-up time while increasing compliance.

### Third-party Integration

And with third-party integration, ResMed Air Solutions has the capability to work with existing billing or electronic medical record (EMR) software — so you’ll spend less time entering data into multiple systems.

### Device Features

ResMed’s AirSense™ 10 therapy devices combine elegant simplicity with intelligent features to allow for more efficient setups and improved patient care.

ResMed’s AirCurve™ 10 devices are designed to help you set up patients quickly and easily, while improving sleep quality for even the most challenging patients.
