

Gecko Nasal Pad

Reduce the occurrence of NIV-related pressure ulcers

Did you know that 5 percent of hospital-acquired pressure ulcers occur on the nose?¹ Considered preventable, CMS and several private insurers do not reimburse for pressure ulcers of stage III severity or greater that develop during hospitalization.² ResMed's Gecko nasal pad is designed to alleviate skin irritation, facial sores and mask discomfort.

Improved mask comfort

The Gecko nasal pad, when used with a patient's mask, helps create a better seal. This limits mask leak and mask movement, resulting in reduced skin breakdown and greater comfort – critical in helping patients accept and enjoy their NIV therapy.

Reduced cost

The Gecko nasal pad can help your hospital save money by preventing costly, non-reimbursed nasal pressure ulcers, reducing patients' length of stay, and maximizing hospital staff efficiency.

Designed to fit all shapes and sizes

Patients of every ResMed mask size can use the Gecko nasal pad, which adjusts easily to the contours of any face. It contains a non-toxic, hypoallergenic polymer gel that's fully washable – no natural rubber latex or silicone.

For safer, more comfortable NIV therapy, go with the Gecko.
